

Standard ECMA-202

PISN - Specification, Functional Model and Information Flows - Call Intrusion Supplementary Service (CISD)

2nd edition (June 1997)

This Standard specifies the Call Intrusion supplementary service (SS-CI), which is applicable to various basic services supported by Private Integrated Services Networks (PISN). Basic services are specified in [ECMA-142](#).

Call Intrusion (SS-CI) is a supplementary service which, on request from the served user, enables the served user to establish communication with a busy called user (user B) by breaking into an established call between user B and a third user (user C).

Supplementary service specifications are produced in three stages, according to the method described in ETS 300 387. This Standard contains the stage 1 and stage 2 specifications of SS-CI. The stage 1 specification (clause 6) specifies the supplementary service as seen by users of PISNs. The stage 2 specification (clause 7) identifies the functional entities involved in the supplementary service and the information flows between them.

NOTE

For this Standard, stage 2 does not consider the split of functionality between a functional terminal at user B and the local PINX. Terminal functions and local PINX functions at user B are included in the same Functional Entity.

The following files are provided in this set of CD-ROMs:

File name	Size (Bytes)	Content
ECMA-202.PDF	1'012'828	Acrobat PDF file
ECMA-202.PSC	2'639'212	Corresponding PostScript file
