

Standard ECMA-271

Extended Commercially Oriented Functionality Class for Security Evaluation (E - COFC)

2nd edition (December 1999)

The Extended Commercially Oriented Functionality Class (E - COFC) extends the application of ECMA's class of commercial security functions (Standard [ECMA-205](#)), to an environment of network based systems.

The identified security requirements specify a set of security functions for a commercial environment, which is addressed in three sub-classes:

- The Enterprise Business class, addressing IT systems within a single legal business entity.
- The Contract Business class, addressing multiple legal business entities (Closed User Group) that work together under a Common Contract. The IT systems are network based.
- The Public Business class, addressing multiple legal units which do business on the basis of the general law on network based IT systems.

The following files are provided in this set of CD-ROMs:

File name	Size (Bytes)	Content
ECMA-271.PDF	172'405	Acrobat PDF file
ECMA-271.PSC	959'285	Corresponding PostScript file

Printed copies of this Standard can be ordered, free of charge, from documents@ecma.ch.
