

Standard ECMA-133

PISN - Reference Configuration for PISN Exchanges (PINX)

2nd edition (December 1998)

This ECMA Standard specifies a reference configuration (RC) for private integrated services network exchanges (PINXs) for their interconnection to form private integrated services networks (PISNs). The configuration is not intended to require any specific implementation of a PINX, but only to provide guidance for the specification of PINX capabilities.

This RC is sufficient to support ISDN-like applications. It can be extended to also support non-ISDN-like applications.

This RC describes a conceptual PINX. By combining multiple PINXs to a private integrated services network the RC becomes applicable to a PISN.

The following files are provided in this set of CD-ROMs:

File name	Size (Bytes)	Content
ECMA-133.PDF	138'016	Acrobat PDF file
ECMA-133.PSC	600'035	Corresponding PostScript file

Printed copies of this Standard can be ordered, free of charge, from documents@ecma.ch.
