

Standard ECMA-143

PISN - Circuit Mode Bearer Services - Inter-Exchange Signalling Procedures and Protocol (QSIG-BC)

3rd edition (June 1997)

This Standard defines the signalling procedures and protocol for the purpose of circuit-switched Call Control at the Q-reference point between Private Integrated Network Exchanges (PINXs) connected together within a Private Integrated Services Network (PISN).

The Q reference point is defined in ISO/IEC 11579-1.

This Standard is based upon that described in ITU-T Recommendation Q.931, including the provisions for symmetrical operation described in annex D of that recommendation.

Service specifications are produced in three stages and according to the method specified in ETS 300 387. This Standard contains the stage 3 specification for the Q reference point and satisfies the requirements identified by the stage 1 and stage 2 specifications in [ECMA-142](#), [ECMA-148](#) and ISO/IEC 11584.

This Standard is applicable to PINXs which interconnect to form a PISN.

Annex ZC is an integral part of this Standard.

The following files are provided in this set of CD-ROMs:

File name	Size (Bytes)	Content
ECMA-143.PDF	742'462	Acrobat PDF file
ECMA-143.PSC	4'078'274	Corresponding PostScript file
